## Epignosis uses a simple strategy but very powerful indeed.

The reason why many attempts at creating automated systems fail is because of the dynamics of the market. The Epignosis team has worked at testing and optimizing a number of commonly used strategies only to realize that many robots will eventually lose if left to trade for some time. This inevitable fate of most popular robots is very disturbing given the fact that they cost an arm and a leg to buy only to blow your account.

Therefore we have spent some time implementing all known strategies out there and put them to test over a long period of time however, it is sad to realise that most not if all strategics fail within a short period of time. We then analysed the trading style of one of the Forex Nasdaq Billionaire CEO, Caleb who is an expert in trading.

## What makes Caleb a great trader

We spent days, obsevring him trade different instruments and we noticed a few things about him that we think are the basis of his great success.

- **Discipline:** He trades at a specific time, with specific conditions.
- **Break Even:** He breaks even once he is in reasonable profits.
- **Locks Profits:** He locks profits as soon as he is wining.
- **Cuts Losses Quickly:** He does not hold and losing trade for long.
- **Has a daily Target:** He exits his trades once he reaches his targets
- **He risks:** He risks hard but his risk is within his limits. He is trading on a highly volatile period in time so he only needs even the slightest of the moves to make huge profits. At the same time keeping is loss acceptance very low. This gives him the edge over the market.

## Why humans fail at trading

In as much as we have investigated failures of the automated systems, the vast majority of retail traders (App. 90%) of all traders lose money trading CFDs. This is a quite unfair proportion given the fact that everyone who enters into trading has belief that they will make money. Human emotions, coupled with indiscipline makes us lose in 5 major ways.

1. Not being patient enough to wait for the right time and setups
2. Holding on to losing trades or even worse adding more to losing trades
3. Not taking profit when it is time to do so eventually losing
4. Being overzealous thereby risking more than reasonable
5. Being fearful thereby not entering trading opportunity as they come

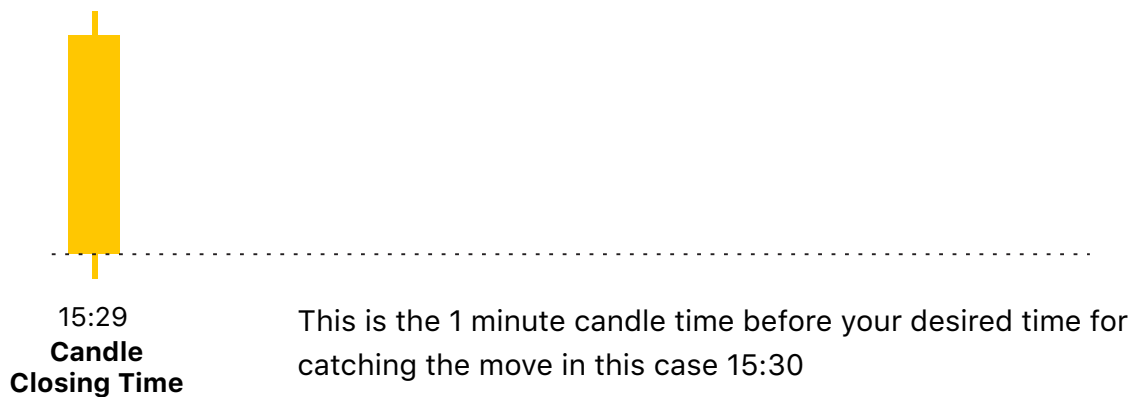

## Trading with knowledge vs trading with strategy

Since 90% of all retail traders lose money, then who does make money? The evidence shows that the banks and large institutions are the winners after all. This is because that these types of traders trade with information as compared to strategy. Just because you have a good strategy only will not guarantee your winnings but the knowledge you have about when the market moves and to which direction will make you win more trade than you lose. Therefore Epignosis is created to trade with knowledge as opposed to strategy only.

In the next pages, we will explain to you how the robot works. This will give you the power you need to utilize this robot to make the most out of the market. We will also provide you with setups and how to set the EA properly. We would like to thank you for purchasing this product and we cannot wait for your positive feedback.

## How Epignosis Works

Epignosis Robot can be used when you know the time that a specific trading pair or instrument moves. Take for example, the Us100 moves swiftly at 15:30 UTC+2. During this time the robot can be set to catch the biggest move tat the market makes.

The EA will use pip measurement value to measure pips in both directions and set sell stops and buy stops.

At the same time the EA places take profit according to the reward ratio set. The stop loss is put at the plotting candle closing time. You can set pips that you want the robot to put a break even stop loss. For example if I am in profit of 10 pips put stop loss on break even so that you do not lose. When the market reverses.

If the market triggers your stop loss then it might proceed to activate a sell stop that will win. So with a risk reward of one as to three you would have only lost 1 part of 3. and 2 parts as profit. More about this in our explanation videos.

**This has been back tested and has shown tremendous results.**

## A guide to putting the correct settings

Firstly determine your broker's time zone. Brokers' time zones differ so do take that into consideration. You will have to work with the broker's server time zone in order to setup the time correctly.

## Opening Session Times UTC

Sydney is open from 21:30 UTC

Tokyo is open from 00:30 UTC

London is open from 07:30 UTC

New York move 13:30 UTC

If your broker uses UTC set the times as times as follows:

## Every chart with USD, or US indices like Us30, Nasdaq, USOIL, And US Stocks.

Basically everything that has to do with US will be affected when the New York session opens. So set the parameters like this:

EPIGNOSIS 2.00

Common Inputs	
Variable	Value
01 Unique Magic Number	892735
ab Session Open Time	13:30
ab Candle Close Time	13:29

Basically everything that has to do with US will be affected when the New York session opens. So set the parameters like this:

## Trading Instruments to set New York times

USTECH / NASDAQ / US 100

US 30 / DOW JOHNES / WALLSTREET 30

All currency pairs with USD in them e.g. EURUSD or USDJPY

All US based Stocks like GOOGL etc

All commodities and metals attached to the USD like GoldUSD or USOIL

\*Basically anything correlated to the American Economy.

## The Same Applies to other sessions and here are the list of charts to consider.

### Time Settings

Anything with **Australian Dollar or New Zealand Dollar** (AUD)/(NZD) or tied to the Australian/New Zealand Economy:

Set Opening Session Time to 21:30

Set candle close time to 21:29

Anything with **Japanese Yen** (JPY) or tied to the Japanese Economy or anything Asian Economy:

Set Opening Session Time to 00:30

Set candle close time to 00:29

Anything with **EUR or GB or CHF** or anything European Economy:

Set Opening Session Time to 07:30

Set candle close time to 07:29

**Do not forget to adjust to your brokers timezone. Example: if your broker's time is UTC+2 then you need to add 2 hours to the times above. So 13:30 becomes 15:30 and so on.**

## Other Settings

### Pip Measurement

Measures the pips you want to allow for the market to move and you ride the direction of that market. For example with the new York Time 13:29 candle closing we mark it then we measure some pips to the up side and to the down side then we set our traps. If price moves to the downside it will trigger our sell stop. If it moves to the upside then it will trigger our buy stop and we continue with it upwards.

If it goes up and trigger our buy stop then come back down before reaching our take profit we will be having a break even stop loss so we do not lose on that trade. Then if it continues down it will trigger our sell stop and we can win that one or break even. This is the power of Epignosis.

### Stop Loss Offset

Our Stop loss will be automatically put on the closing candle point but we might want to increase it by a few pips. Enter the value of the pips here.

### Reward Ratio

This is a multiple of your stop loss. For example if your pip measurement is 5 then if you set your Reward Ration to 3 it means that your Take profit will be automatically set as 3 times your risk which is 5 pips. TP will be 15 pips. This is the same as 1:3 ratio. The 1 being the pip measurement since this will be your stop loss as well.

### Use break even SL

If set to true the the robot will set a break eevn stop loss once you are in certain amount of pips in profit.

## **Profit Points for break Even (In Pips)**

Determines the pips in profit that you want the EA to set break even stop loss. For instance: when we are 10 pips in profit. put stop loss on break even.

## **Close all orders on TP**

If set true the EA will close all pending orders if one order reaches TP. This can be helpful in order to prevent the other stop order in the opposite direction to get triggered when you have made profit with the other. For example your buy stop was triggered and reached TP. close the other sell stop we have put and wait to trade again the next day.

## **Close on % Equity Growth**

This will close the trades after an equity percentage profit is achieved. Example if you set it to 20 it means that the robot will close all trades if your Equity grows by 20% even when TP as not been reached.

## **Lot size**

Set lot size according to the number of charts you are attaching the EA to for example if you are attaching the EA to 5 charts set a small lot size so that if all trades get activated on all the charts your Account will be able to hold the trades without blowing. If you have low equity better trade one asset at a time.

## **Percentage lot**

This will automatically calculate the lot size according to your balance. So if it is 2% of your account then it will calculate the lot you it needs to open. Avoid using this for accounts less than \$1000 or R1000.

## **Close All Trades Outside Window**

When this setting is set to true. You will be able to limit trades so that when stop orders are placed, they will be closed if not activated the same day.

This will help to reduce old pending orders to remain if not activated.

## **Window Open and Window Close**

This is the time that you want the bot to trade during the course of the day.

Take for instance, when trading NASDAQ you might want to limit your trades within the first 1 hour or two just after the opening when all trades will be closed if not activated.

**Now that you know how it works download some of our sets to use on different charts from our website**

**[www.epignosisrobot.com/sets](http://www.epignosisrobot.com/sets)**

**Be sure that you are logged in before downloading sets**

**Take note as the team will be testing on more pairs, we will update you with unlimited sets for different account balances and instruments.**

## About Licence and Support

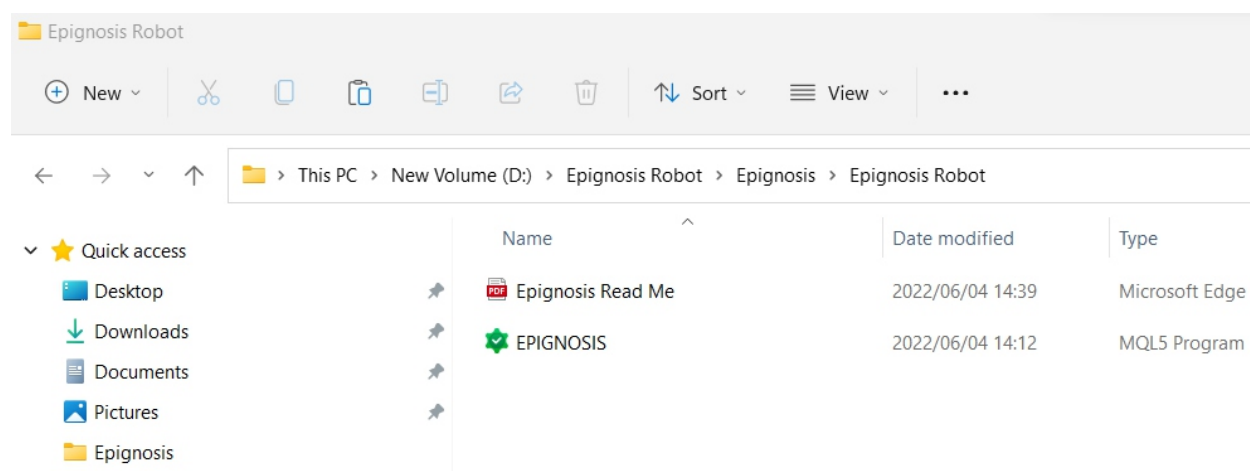

The Epignosis licence is valid for 12 months this means that you can use the robot on one account to trade unlimited pairs and instruments in that account. Mt4 and Mt5 versions are available you can choose to get both thereby having a chance to use it on 2 different accounts.

If you have only Mt4 aversion and you would like us to give you the Mt5 as well, you can write to [support@epignosisrobot.com](mailto:support@epignosisrobot.com).

During your licence period, you will get free updates, free settings for newly discovered sets. You will aslo get free technical support is you are experiencing any challenges.

## Installing the Robot

To install the robot, Unzip the contents of your downloaded EA or the EA sent to your PC. Depending whether you are using MT4 or MT5 or both, the number of files in the folder may differ. Epignosis Read Me is a PDF Manual Document.

There are different methods you can use to install the EA onto your trading terminal. The first one is to double click on the MetaTrader app will be opened automatically with the EA installed on it.

The second way is right click on the EA file and copy it. Now open your MetaTrader app, go to the menu at the top and click on File > Open Data Folder.

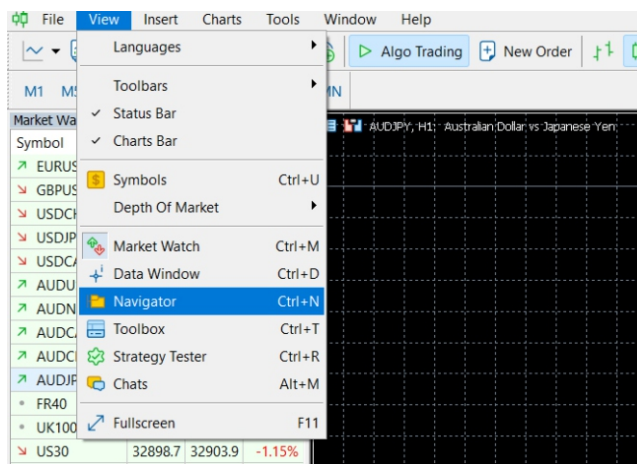

Navigate to MQL5 > Experts > Advisors and paste the EA here. Now restart your Meta trader app. Your EA is installed into your Meta Trader app.

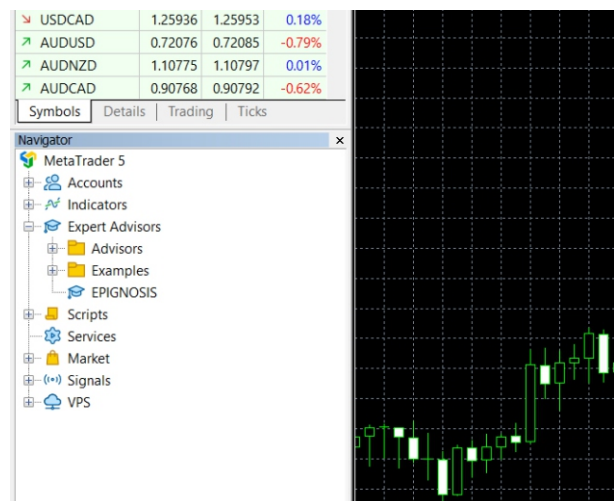

## Adding the robot to the chart

Now that your EA is installed successfully onto your trading terminal now it's time for us to add the robot to the charts that we want it to trade on. Please note that merely installing the robot will not initiate trading and these next steps need to be performed in order to make sure the robot is ready to trade for you.

If you cannot see the Navigator panel. Go to View and click on Navigator to open the folder where you can find indicators, EAs etc. including the EPIGNOSIS EA you just installed.

Click on Expert Advisors or Expert Advisors > Advisors depending which folder you have installed the EA in. Find the EA and drag and drop it onto any chart that you want it to trade on. Checkout next topic for parameters.

For more information on how to install checkout the online documentation on: <https://doc.epignosisrobot.com/>
