Introduction

Thank you for your purchase of “Fibo Machine Pro”!

Fibo Machine Pro software package includes:

- Step-by-step users guide
- Indicator's secret trading algorithm explained in detail
- Fibo Machine Pro indicator software itself
- Live Actions Screenshots
- Sample Trades examples
- Personal "I will help you" promise from the developer

Fibo Machine Pro is a special brand new indicator. It uses unique Fibonacci levels in a very smart way. What you will see when you attach this indicator to your chart are colorful levels, different for each day. These levels will show you entry level, stop loss level and 3 take profit levels. You can choose between any of them, depending on the style of your trading. On top of all this, this new indicator is also equipped with highly customizable signal alerts system and an option to change the color of the signal lines.

It's extremely important for you to fully understand how Fibo Machine Pro works. Read this guide carefully, it has a lot of important information that could greatly improve your trading experience.

What or Who is Fibonacci?

Fibonacci trading has become very popular amongst Forex traders in recent years. Nevertheless, have you ever wondered where such a technique came from? The trading technique of Fibonacci came from an Italian mathematician who lived back in the thirteenth century in Italy. His name was Leonardo Fibonacci.

Fibonacci expanded his studies back in the thirteenth century and led to create today's understanding of the Fibonacci technique.

What did he discover?

Fibonacci went on to discover a specific number sequence that was applied to natural proportions of matter- nature and the universe.

The Fibonacci number sequence

1, 2, 3, 5, 8, 13, 21... ..

Each number in this Fibonacci number sequence is found simply by adding the two previous numbers

together. For instance, $2 + 3 = 5$ and $5 + 8 = 13$.

Fibonacci continued his mathematical studies and expanded his number sequence to discover the 'Golden Ratio' as known today in the Forex market. The 'Golden Ratio' was determined by dividing any number after 3 by the next consecutive number. The answer would be 62.5. As you go higher up in the number sequence and perform the same calculation, the resulting ratio would be 61.8%. This 61.8% is identified as the 'Golden Number'.

Although Leonardo Fibonacci was not the first person to recognize such repeating patterns and ratios of the universe, his study of the number sequence is what is so famously known today in the Forex industry.

NOTE: Please try using the indicator on a demo account first. Only move to trading with it on a live account, once you are completely familiar with Fibo Machine Pro and fully understand all the simple rules on how to use it correctly.

Do not hesitate to contact us if you have any questions!

We wish you a great success!
Karl Dittmann's Trading Team

www.FiboMachinePro.com

Installing the Indicator

IMPORTANT: Make sure to **update your MT4** to the latest build. Fibo Machine Pro is designed to give you best results and to work properly only with the latest version of MT4 platform.

Unzip the zip file that you have downloaded:

1) The indicator file is **FiboMachinePro.ex4**

MT4 installation instructions:

Step 1:

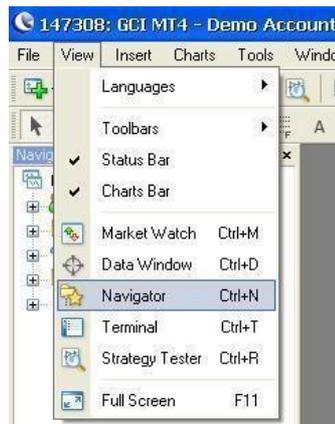

- 1) Open your MT4 platform
- 2) Click File — Open Data Folder. Here you will find a folder called MQL4.
- 3) Open folder MQL4. Here you will find Indicators folder. Copy your Indicator (ex4) file into MQL4/Indicators folder. Do this by right clicking on the file and clicking —> copy and then —>paste.
- 4) Restart your MT4.

If you have any difficulties, please write me an email and I will help you as soon as possible.

My email is: karl@karldittmann.com

Step 2: Open the MetaTrader® platform, and click on View -> Navigator.

You can also press CTRL+N.

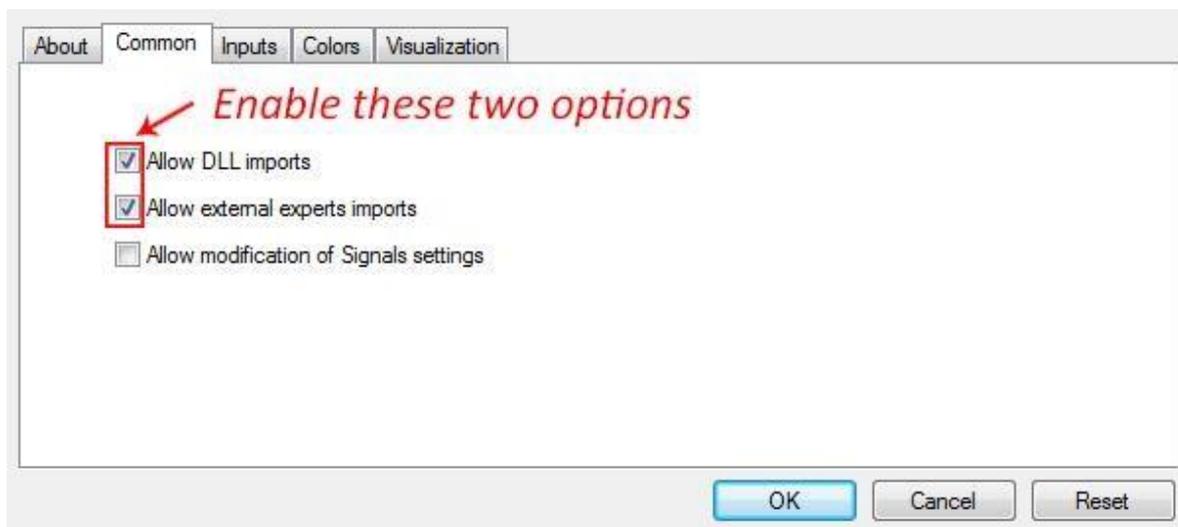

Click on 'Navigator'

Step 3: A window titled 'Navigator' will appear. Double click on Indicators.

Step 4: You should see the **FiboMachinePro** in the Indicators folder. Double click on the FiboMachinePro file and click OK to load it onto your chart.

Step 5: Once you attach Fibo Machine Pro, make sure to enable the two options as shown below and only then click OK.

karl@karldittmann.com

Informer

Fibo Machine Pro has been enhanced with a new smart informer system, which is designed to make your trading more pleasant, convenient and profitable.

EURUSD, H1	1.11661	1.11687	1.11636	1.11651
Fibo Machine Pro				
EURUSD, H1				
Entry Level:	1.11661			
Stoploss Level:	1.11608			
TP Safe:	1.11728			
TP Medium:	1.11768			
TP Aggressive:	1.11835			
Current Trend:	Up			
Trend Power:	Medium			
Time until next candle:	8M 42S			
Current Time:	13:51			

The informer shows the indicator name, currency pair and timeframe, entry and stop loss levels, 3 different take profit levels (will be explained in the guide), current trend direction, trend power, time until next candle and current time.

MUST READ RULES on how to use the signals

Important Rule #1:

Do not use the indicator on a flat market! Use the indicator ONLY at active market hours – for example London session, US session.

Trend will not be noticeable on a weak market (night time, Christmas period, other holidays etc...) keep reading and I will explain everything...

Important Rule #2:

- Identify a global trend. (Remember? Trend is your friend?)
- Ignore all signals against a current GLOBAL trend!
- Try using the informer to find out how strong the current trend is.

Example:

Global trend is up – but you get a –sell signal
(It's better to ignore it and wait for a –buy signal to enter)

This is the most important rule, if you follow it you will have almost no losing trades at all.

Often signals that are against the global trend win as well. However, entering these trades might be more risky, than trading with the direction of the trend.

Important Rule #3:

The next highly important rule: Do not trade and do not use the indicator on a sideways trend. This is a –MUST follow rule.

If you DON'T follow or ignore the rules above – good results are NOT guaranteed!

Stop Loss

Place your stop loss according to the popup alert SL. It is also shown in the informer.

IMPORTANT: Set stop loss for ALL your trades and DO NOT deviate from it. Once the trade has touched your stop loss, be disciplined and close the trade. This will protect you from major capital losses.

Entering Trades

Buy when the signal price crosses the aqua **Entry Level (BUY)** from bottom to top. (As shown on the screenshot to your left)

Sell when the signal price crosses the salmon color **Entry Level (SELL)** from top to bottom. (As shown on the screenshot to your right)

Exiting Trades

Option 1

Exit your trades when the price reaches one of the three Take Profit Levels. You can choose any of the Levels depending on your proffered trading style. This will ensure that you trade with maximum profit for your style.

If you enter with **BUY**
(**Aqua Entry Level (BUY)** crossed from bottom to top)

-exit as soon as the price reaches: **Safe Take Profit Level (BUY)**,
Medium Take Profit Level (BUY)
OR **Aggressive Take Profit Level (BUY)**

If you enter with **SELL**
(**Salmon Entry Level (SELL)** crossed from bottom to top)

-exit as soon as the price reaches: **Safe Take Profit Level (SELL)**,
Medium Take Profit Level (SELL)
OR **Aggressive Take Profit Level (SELL)**

Option 2

You can also exit according to the Take Profit (TP) level that is shown in the popup alert window. The alerts will show the same Take Profit Levels as you see on the chart. It very convenient since the alerts alarm you when the price reaches the desired Take Profit Level.

You can easily configure the alerts system to alarm when the price reaches a specific Take Profit Level of your choice or whenever the price reaches any of them.

Option 3

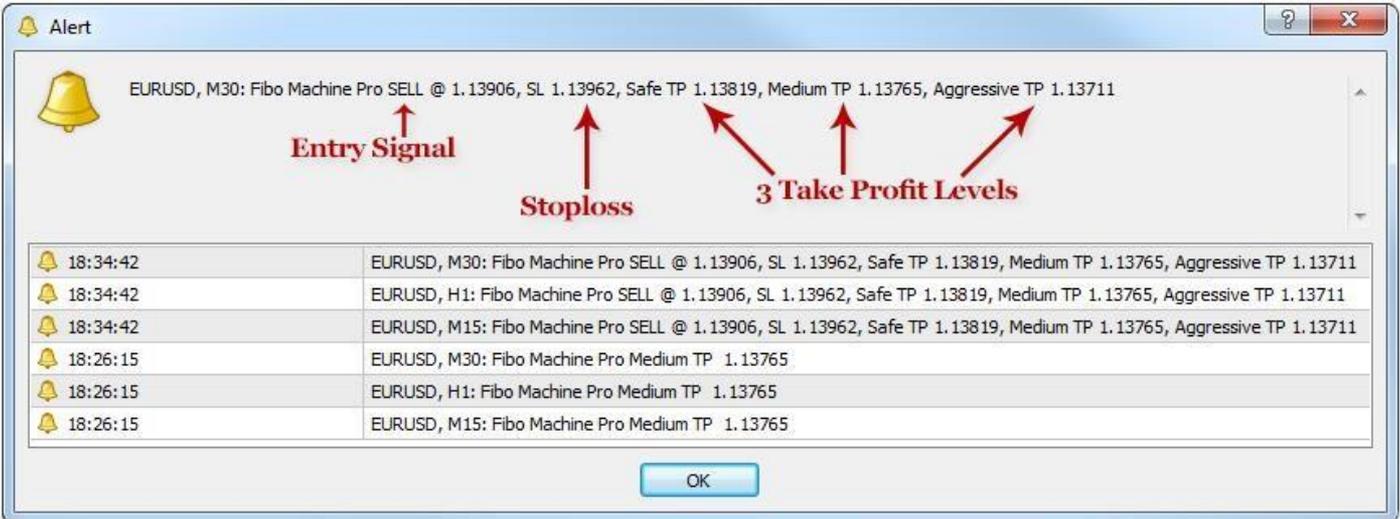

Another exit mechanism which is highly effective is to exit near strong support or resistance levels. It is a method that generates exits earlier, however you can just go for Safe Take Profit Levels instead.

Time Frames and Pairs

-M15, M30, H1 and H4 only. H1 recommended

-Works on all major pairs. EUR/USD, GBP/USD, EUR/JPY, GBP/JPY recommended.

Signal Popup Alert Window:

Alert

EURUSD, M30: Fibro Machine Pro SELL @ 1.13906, SL 1.13962, Safe TP 1.13819, Medium TP 1.13765, Aggressive TP 1.13711

Entry Signal

Stoploss

3 Take Profit Levels

18:34:42	EURUSD, M30: Fibro Machine Pro SELL @ 1.13906, SL 1.13962, Safe TP 1.13819, Medium TP 1.13765, Aggressive TP 1.13711
18:34:42	EURUSD, H1: Fibro Machine Pro SELL @ 1.13906, SL 1.13962, Safe TP 1.13819, Medium TP 1.13765, Aggressive TP 1.13711
18:34:42	EURUSD, M15: Fibro Machine Pro SELL @ 1.13906, SL 1.13962, Safe TP 1.13819, Medium TP 1.13765, Aggressive TP 1.13711
18:26:15	EURUSD, M30: Fibro Machine Pro Medium TP 1.13765
18:26:15	EURUSD, H1: Fibro Machine Pro Medium TP 1.13765
18:26:15	EURUSD, M15: Fibro Machine Pro Medium TP 1.13765

OK

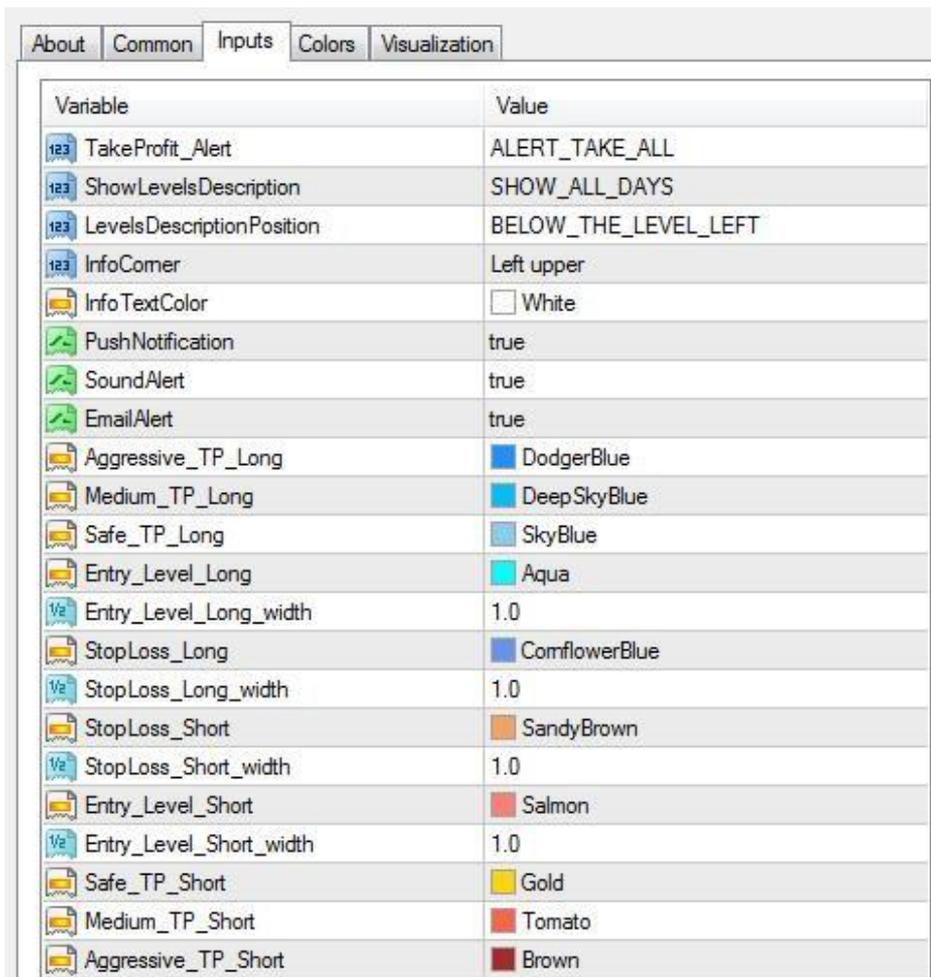

EURUSD, M30 – pair, timeframe

BUY/SELL @ Price – entry price

TP – Take Profit

SL - Stop Loss

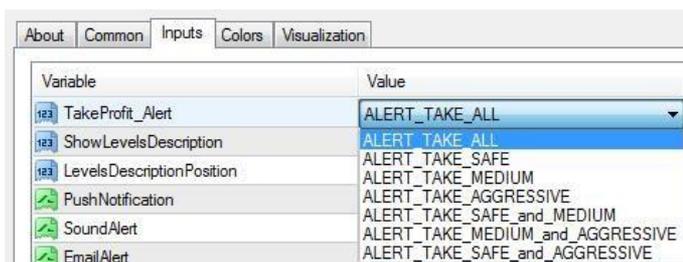

Input Parameters:

Variable	Value
TakeProfit_Alert	ALERT_TAKE_ALL
ShowLevelsDescription	SHOW_ALL_DAYS
LevelsDescriptionPosition	BELOW_THE_LEVEL_LEFT
InfoComer	Left upper
InfoTextColor	<input type="checkbox"/> White
PushNotification	true
SoundAlert	true
EmailAlert	true
Aggressive_TP_Long	DodgerBlue
Medium_TP_Long	DeepSkyBlue
Safe_TP_Long	SkyBlue
Entry_Level_Long	Aqua
Entry_Level_Long_width	1.0
StopLoss_Long	ComflowerBlue
StopLoss_Long_width	1.0
StopLoss_Short	SandyBrown
StopLoss_Short_width	1.0
Entry_Level_Short	Salmon
Entry_Level_Short_width	1.0
Safe_TP_Short	Gold
Medium_TP_Short	Tomato
Aggressive_TP_Short	Brown

**All the Inputs are ready to use/trade by default.
You don't have to change anything.**

TakeProfit_Alert is the most important parameter.
It's set to "ALERT_TAKE_ALL" by default.

Variable	Value
TakeProfit_Alert	ALERT_TAKE_ALL
ShowLevelsDescription	ALERT_TAKE_ALL
LevelsDescriptionPosition	ALERT_TAKE_SAFE
PushNotification	ALERT_TAKE_MEDIUM
SoundAlert	ALERT_TAKE_AGGRESSIVE
EmailAlert	ALERT_TAKE_SAFE_and_MEDIUM
	ALERT_TAKE_MEDIUM_and_AGGRESSIVE
	ALERT_TAKE_SAFE_and_AGGRESSIVE

There are several modes for **TakeProfit_Alert**. Each mode corresponds to specific take profit levels alerts.

For example:

- 1) If you choose **ALERT_TAKE_ALL** - you will be alerted whenever any of the 3 take profit levels is reached (safe, medium and aggressive).

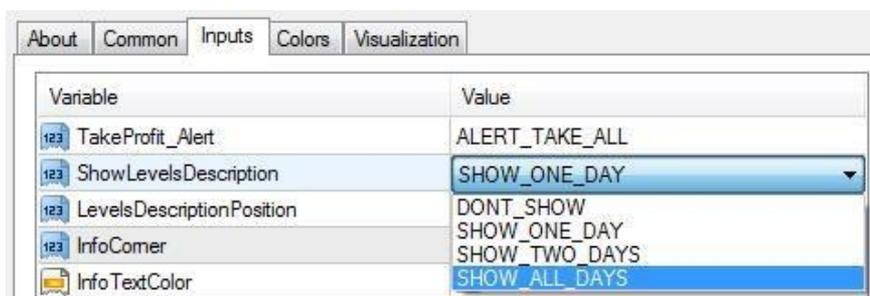

2) If you choose **ALERT_TAKE_MEDIUM** - you will be alerted only when medium take profit level is reached. The alerts will not inform you when safe or aggressive take profit level is reached.

3) If you choose **ALERT_TAKE_SAFE_and_AGGRESSIVE** - you will be alerted only when safe or aggressive take profit level is reached. The alerts will not inform you when medium take profit level is reached.

Hope this gives you the picture and you understand how the remaining modes work. If not, please write me an email to **karl@karldittmann.com** and I will help.

These modes are made so that you can select the take profit alerts you want, without being interrupted by those that don't suit your trading style.

The next input parameter is **ShowLevelsDescription**

It is responsible for the description of the levels (Level Names) shown on your chart.

You can choose not to show the description of the levels by selecting **DONT_SHOW**, show description only of the last day - **SHOW_ONE_DAY**, show description only on last two days - **SHOW_TWO_DAYS** or show description for all days - **SHOW_ALL_DAYS** (Default)

LevelsDescriptionPosition parameter.

This one simply allows you to choose whether you want the Level Names to be shown above or below (and also left middle or right) the actual Levels.

Variable	Value
TakeProfit_Alert	ALERT_TAKE_ALL
ShowLevelsDescription	SHOW_ALL_DAYS
LevelsDescriptionPosition	BELOW_THE_LEVEL_LEFT
InfoCorner	BELOW_THE_LEVEL_LEFT
InfoTextColor	BELOW_THE_LEVEL_MIDDLE
PushNotification	ABOVE_THE_LEVEL_LEFT
SoundAlert	ABOVE_THE_LEVEL_MIDDLE

The next parameter is **InfoCorner**, which is responsible for moving the informer in any of the corners of your trading chart. It's useful to change this input when the info box is coming on top of the price and makes the signals hardly visible.

Info TextColor Allows you to change the font color of the informer.

Left upper – Upper Left Corner

Right upper – Upper Right Corner

Left lower – Bottom Left Corner

Right lower – Bottom Right Corner

Tip: If you want to remove the informer from the current chart, just set the corner value to Don't show info. To put it back on, use any other value.

PushNotification is responsible for sending push notifications with all details about every signal to your mobile device. Push notification is set to "false" by default. This option can be turned on by selecting "true".

If you wish you may change the sound (**SoundAlert**) and email (**EmailAlert**) alerts to true/false. By default, sound alert is set to "true" and email alert to "false"

Other inputs allow you to change color and width of the signal levels.

Please continue reading to learn how to configure email alert and push notification.

EMAIL alert setup:

Setup your metatrader4 to send email:

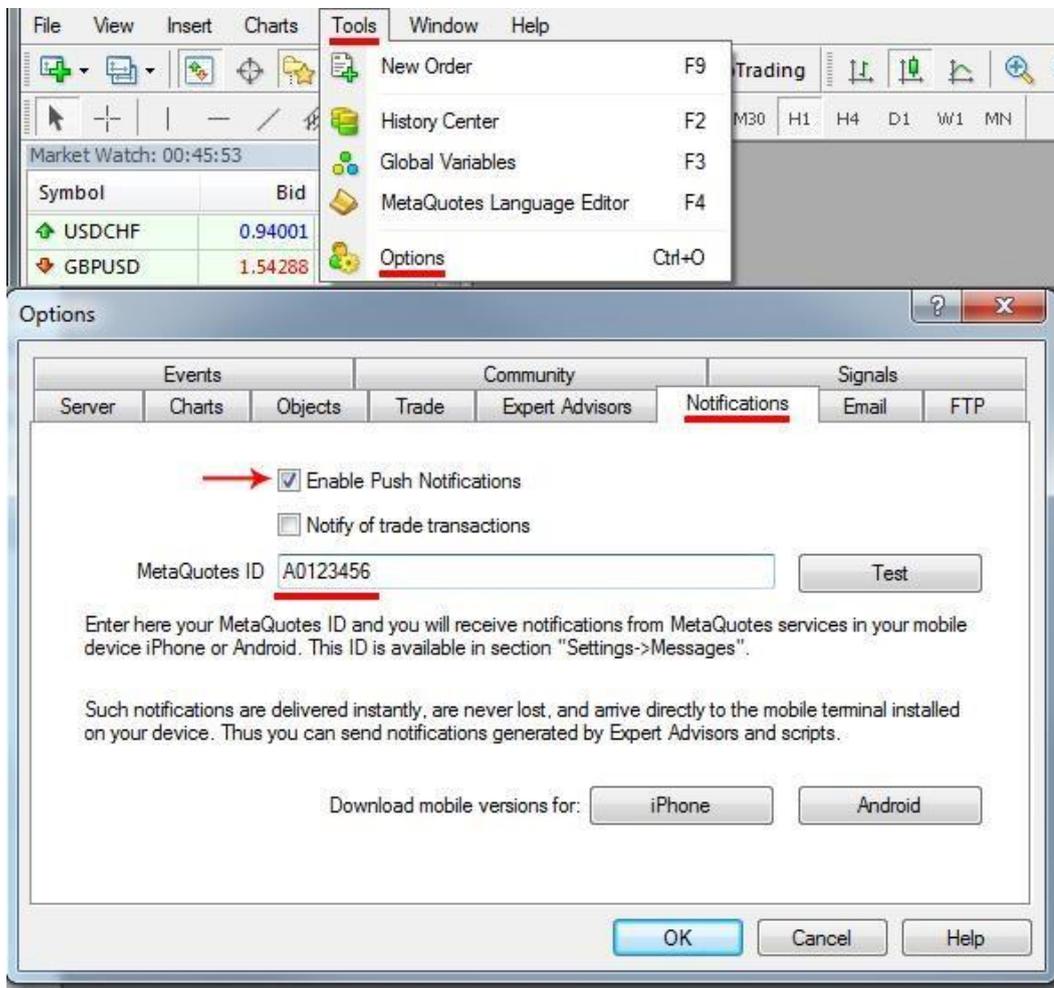

Email alert must be activated in the Fibbo Machine Pro INPUTS. After it's activated, all you have to do is setup your own mail server info...

Email setup can be done in: Tools => Options => Email

If you need more info on how to setup an email alert, go to [youtube.com](https://www.youtube.com) and search for `||mt4 email setup||` there are plenty of free explanation videos.

Push Notification Setup:

Push notifications will be sent to your mobile device via MT4 app and they will include all the information about every signal generated by Fibo Machine Pro.

To set up push notifications, please follow these steps:

- 1) Download and install MetaTrader 4 application from appstore or google play depending on the device you are using.
- 2) Open the MetaTrader 4 application on your device. Go to Settings and look for MetaQuotes ID. It's a combination of numbers and letters. Write this as we are going to need it.
- 3) Open MetaTrader 4 on your computer and go to Tools->Options->Notifications. Enable "Enable Push Notifications", enter your MetaQuotes ID and click OK.
- 4) Done! Attach Fibo Machine Pro to a chart of your choice and enjoy push notifications sent directly to your mobile device!

Please note: For push notifications to work, Fibo Machine Pro must be attached to a chart, Push Alert in the indicator inputs must be set to "true", your computer and mobile device must be connected to the internet.

Recommendations

Use the indicator **ONLY** during **ACTIVE** market hours!

Do not use the indicator on a weak/slow market – outside recommended trading hours (London or US sessions). Signals never work well on a weak market; this has been proven many times...

The London session is the largest market and it opens at 08:00 GMT or 03:00 EST and closes at 17:00 GMT or 12:00 EST.

Trading is best between 08:00 GMT and 10:00 GMT

The New York session opens at 13:00 GMT or 08:00 EST and closes at 22:00 GMT or 17:00 EST.

The best trades occur in the first 2-3 hours.

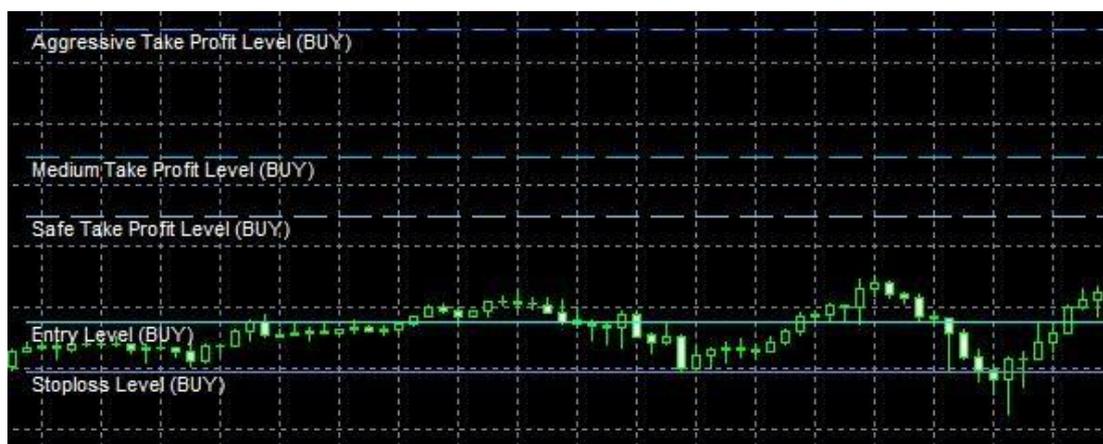

The time is shown in 24:00 format.

IMPORTANT: It is extremely important to trade only following the current trend! It will cut ALL bad trades! Avoid trading against trend at all times.

Look at the informer and see if it shows Current Trend: Up or Down.

Enter with BUY if it shows Up or with SELL if it shows Down.

Stay away from using the signals when you see unclear trend, flat or sideways trends – example:

Money Management

Money management is a very important concept that has an enormous effect on draw downs and margin calls. The cardinal rule of money management is the following:

You should only risk 1-3% of your account on any single trade.

You may have heard this rule a hundred times before, but it is amazing to see how many good traders fail to comprehend this concept – and don't understand why they are wiped out again and again, despite great entries and timing of trades.

Another important concept that is related to your **stoploss**:
In this strategy you learned how to place a stop loss for each setup.

This stop loss is calculated regardless of your level of risk or your equity, and is based solely on price-action. After a stop loss is set, calculate your trade size so you achieve the right percent of risk for your trades.

For example: your stop loss is 10 pips, and your equity is 10,000\$, you wish to risk 2% of your equity in this trade, so you enter a trade with 2 lots – so your risk is 200\$, or 2%.

Another Actual trade example:
